Cost to replace highlander hybrid battery

After taking my Toyota Highlander Hybrid in for regularly scheduled maintenance, the mechanic told me that my battery is going to die. He said the replacement is expensive, but he didn't give me a dollar figure. How much should I budget for a Toyota Highlander Hybrid battery replacement?Eric SchadSorry to hear that the battery in your Toyota Highlander Hybrid is about to give out! Unfortunately, your mechanic is right—a Toyota Highlander battery replacement costs between \$2,000 and \$5,000.However, this amount will vary depending on several factors:Whether you buy a new or used/refurbished batteryWhere you get the battery replaced (dealer vs. repair shop)The model year of your Highlander HybridKeep in mind that getting the replacement done at the dealer is the only guaranteed way to get the job done correctly. Other options might be more affordable, but they're also riskier, and typically don't come with a warranty.If you want to save some cash for a battery replacement, review your current insurance policy and shop around for cheap car insurance with the Jerry app.Jerry is a licensed insurance broker that will collect quotes from over 50 top-rated insurers in minutes. After you find a great rate for your Toyota Highlander Hybrid, Jerry can help you buy new insurance and cancel your old policy. Users save an average of \$887 per year. Claire BeaneySo sorry to hear that, there's really nothing more frustrating than a dead battery!The cost to replace a Toyota Highlander Hybrid's battery is between \$587 and \$594, but rates will vary depending on your location and the age of your vehicle.Unfortunately, car insurance usually won't cover the costs of replacing a dead battery. This is usually part of the normal wear and tear your vehicle goes through, and insurance rarely covers wear and tear.If you aren't protected, you can still save money when it comes to your car insurance. If you want cheap car insurance quotes fast, go to Jerry. After providing you with a comprehensive cross-analysis of the best policies across providers, Jerry will handle the phone calls, paperwork, and renewals for your top pick so that you don't have to. They even help cancel your old policy, so you don't have to! Looking for pricing on hybrid drive batteries? We have links below to both aftermarket and dealer suppliers of batteries. Compare pricing and warranty below. Prices From Online Hybrid Battery Suppliers: Refundable Core Deposits By Vendor: Street Smart® - \$400 Core DepositSummit Racing - \$975 Core DepositCarlD - \$975 Core DepositDealer - Varies by local dealer Frequently Asked Questions on Installing a Hybrid Drive Battery What is a Hybrid Drive Battery?A Hybrid Drive Battery is a large battery that assists the engine, providing power to maximize fuel economy. It is usually located behind the rear seats. Why do Hybrid Drive Batteries fail?Like most batteries, Hybrid Drive Batteries fail when they lose their ability to hold a charge. How can I tell if a Hybrid Drive Battery is wearing out (failing)?The vehicle will typically be less peppy and exhibit poorer fuel economy. It may show no/low charge in the morning when you start driving. Certain models will show a warning light on the dash and you will notice the engine revving as well as the battery cooling fan operating at a high speed constantly. Others will show the charge indicator rapidly fluctuate between charge and discharge. What is the typical cost for replacement through the original equipment provider?Per above, Dealerships charge around \$3,000 to \$5,000 to replace a Hybrid Drive Battery and typically require additional components to be purchased, including an ECU on certain models. Other suppliers can sell the battery and have it installed at any local repair shop that will do the installation. How long will it take to replace the Hybrid Drive Battery? 2 to 4 hours depending on the experience of the qualified technician. Hybrid Drive Batteries should only be replaced by a qualified technician. Will the Energy Display show the battery is full with a replacement battery?Healthy Batteries will rarely show full on the display. For example, a Prius Hybrid Drive Battery operates between about 60% and 80% of charge to provide longer life. The display is designed to show the battery as half to three quarters full when it is operationally charged. What will my miles per gallon be after I get a replacement battery?Actual miles per gallon depends on driving habits, terrain, and weather as well as maintenance factors such as gas engine state of tune, fuel, bearings and brakes. How long should a battery last?Most Hybrid owners get between 80,000 and 200,000 miles from their original batteries, or roughly 8-12 years. If the pack has one bad battery can you just put one new cell in it?When one cell has failed, the pack must be completely disassembled to replace the one faulty battery module. Such repairs are short lived at a relatively high cost, without guarantee. It is more cost effective to replace all cell modules at the same time because if one battery has failed, it is likely that the others are nearing the end of their service lives as well. Additionally, it is critical for proper function that all cell modules be at the same state of charge, so if one cell is replaced, it will not be in sync with the original cells. Why do suppliers need my old battery?They require your old battery so that they are able to have the basic parts needed to build the remanufactured units. Can I install a Hybrid Drive Battery myself?Safety is an important concern when working with the electrical systems of hybrid vehicles, particularly when removing and installing hybrid vehicle batteries. Because of the high voltage that the batteries generate, removing and installing hybrid batteries is an inherently dangerous activity and can lead to serious or even fatal injuries. Suitable training is essential before removing, installing, or servicing this product which should only be attempted by a qualified technician. Launching a start-up is an exciting opportunity. Determining the costs of launching a start-up begins with knowing the factors on which to base your estimates. Use these guidelines to help you figure out your business start-up costs.Don't Underestimate Your ExpensesA very small-scale business can cost approximately \$3,000 to launch, while most home-based businesses can get started for between \$2,000 and \$5,000, according to the U.S. Small Business Administration (SBA). Start-ups must plan for their first month of expenses and expect these expenditures to grow as the business does. It will be easier to plan for fixed expenses as the months pass, but, initially, these will all be estimated costs when you're looking at your start-up business capital.What Types of Costs Will Your Business Experience?Understanding the costs your business will have will help you estimate your expenses better. There are several different types of expenses involved in launching and operating a start-up. You'll be encountering one-time and on-going expenses, optional and essential costs, and variable and fixed expenses.If you want to run a start-up cleaning business, for example, one-time expenses could be purchasing vacuum cleaners, and the on-going expenses would be the cleaning products that need replenishing.An example of an essential cost is buying a van for transporting prepared food when you're running a catering business start-up, and optional costs might be an office to run the catering business out of during the first year.Fixed costs include rent, and variable costs include those that change like utilities and fuel for your vehicles.Make Cash Flow ProjectionsWhen launching a small business start-up, it's essential to project at least three months ahead regarding the cash flow of your business. You'll be looking at the fixed costs as well as estimating the costs of goods and the best- and worst-case scenarios for revenues. Those who are borrowing money should take into consideration how much they're borrowing and what the monthly payments will be as well as the interest they're paying. Optimally, businesses should launch without borrowing money at all, so they don't have to put that interest against their revenues.How Will You Fund Your Start-Up?When funding a small business start-up, the best way to go about it is to obtain grants or approach friends or family members for funding options. That way, you're not accruing interest against your revenues. Because you don't have to pay back grants, this is your best option. You can apply for grants throughout the lifetime of your small business. Small business loans are available, too, if you're unable to access grants or funding from friends or family members.Don't Forget Tax CostsWhen starting up a business, don't forget about the expenses that incur from paying into and the preparation of taxes. You may be entitled to deduct start-up costs as well as business expenses from your return. You'll see three different categories that the IRS divides for eligible start-up costs which include preparation costs, legal and organizational costs, and research costs.
